A STATE-OF-THE-ART EXPERIMENTAL LABORATORY FOR CLOUD AND CLOUD-AEROSOL INTERACTION RESEARCH

To download **A State-Of-The-Art Experimental Laboratory for Cloud and Cloud-Aerosol Interaction Research** eBook, please access the button below and download the document or get access to additional information that are related to A STATE-OF-THE-ART EXPERIMENTAL LABORATORY FOR CLOUD AND CLOUD-AEROSOL INTERACTION RESEARCH book.

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 44 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. The state of the art for predicting climate changes due to increasing greenhouse gasses in the atmosphere with high accuracy is problematic. Confidence intervals on current long-term predictions (on the order of 100 years) are so large that the ability to make informed decisions with regard to optimum strategies for mitigating both the causes of climate change and its effects is in doubt. There is ample evidence in the literature that large sources of uncertainty in current climate models are various aerosol effects. One approach to furthering discovery as well as modeling, and verification and validation (V and V) for cloud-aerosol interactions is use of a large cloud chamber in a complimentary role to in-situ and remote sensing measurement approaches. Reproducing all of the complex interactions is not feasible, but it is suggested that the physics of certain key processes can be established in a laboratory setting so that relevant fluid-dynamic and cloud-aerosol phenomena can be experimentally simulated and studied in a controlled environment. This report presents a high-level argument for significantly improved laboratory capability, and is meant to serve as a starting point for stimulating discussion within the climate science and other interested communities. This item ships from La Vergne, TN. Paperback.
