

Modeling Dynamic Biological Systems

Filesize: 8.43 MB

Reviews

Here is the finest pdf i actually have go through until now. It is actually rally exciting throgh looking at time period. You will not truly feel monotony at anytime of your respective time (that's what catalogues are for regarding in the event you question me).

MODELING DYNAMIC BIOLOGICAL SYSTEMS

DOWNLOAD

To get **Modeling Dynamic Biological Systems** eBook, make sure you refer to the link beneath and download the file or get access to additional information which might be relevant to MODELING DYNAMIC BIOLOGICAL SYSTEMS book.

Book Condition: New. Publisher/Verlag: Springer, Berlin | This volume teaches computer modeling of biological systems using models created by STELLA software, including cell development, the beating heart and the spread of epidemics. It includes easy-to-use software modules that require no prior experience to use. | Many biologists and ecologists have developed models that find widespread use in theoretical investigations and in applications to organism behavior, disease control, population and metapopulation theory, ecosystem dynamics, and environmental management. This book captures and extends the process of model development by concentrating on the dynamic aspects of these processes and by providing the tools such that virtually anyone with basic knowledge in the Life Sciences can develop meaningful dynamic models. Examples of the systems modeled in the book range from models of cell development, the beating heart, the growth and spread of insects, spatial competition and extinction, to the spread and control of epidemics, including the conditions for the development of chaos. Key features: - easy-to-learn and easy-to-use software - examples from many subdisciplines of biology, covering models of cells, organisms, populations, and metapopulations - no prior computer or programming experience required Key benefits: - learn how to develop modeling skills and system thinking on your own rather than use models developed by others - be able to easily run models under alternative assumptions and investigate the implications of these assumptions for the dynamics of the biological system being modeled - develop skills to assess the dynamics of biological systems | I. INTRODUCTION.- 1. Modeling Dynamic Biological Systems.- 2. Exploring Dynamic Biological Systems.- 3. Risky Population.- 4. Steady State, Oscillation and Chaos in Population Dynamics.- 5. Spatial Dynamics.- II. PHYSICAL AND BIOCHEMICAL MODELS.- 6. Law of Mass Action.- 7. Catalyzed Product.- 8. Two-Stage Nutrient Uptake.- 9. Iodine Compartment.- 10. The Brusselator.- 11. Signal Transmission.-...
